# SiteMap

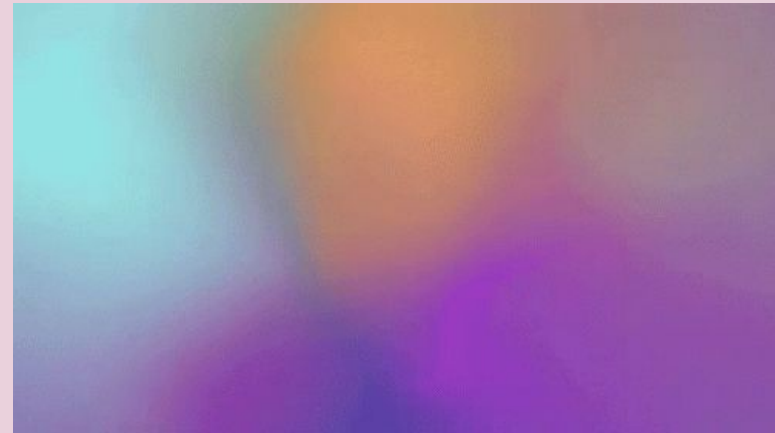

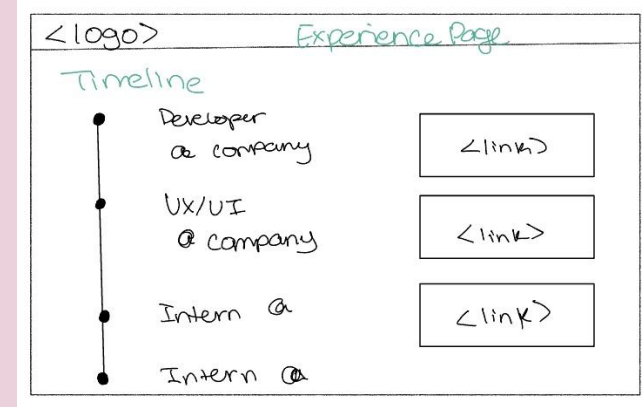

# What I figured out

- Aligning items next to each other using div and flexbox
- Media Query for the hamburger at Home Page
- Navbar Debugging

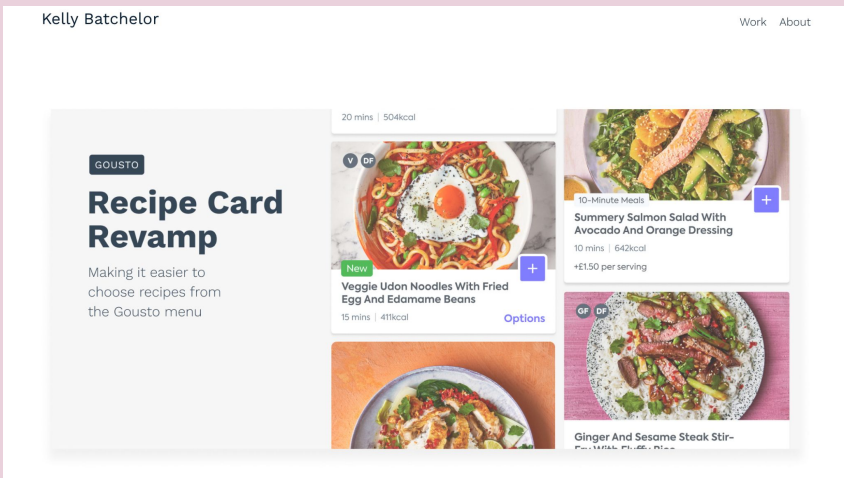

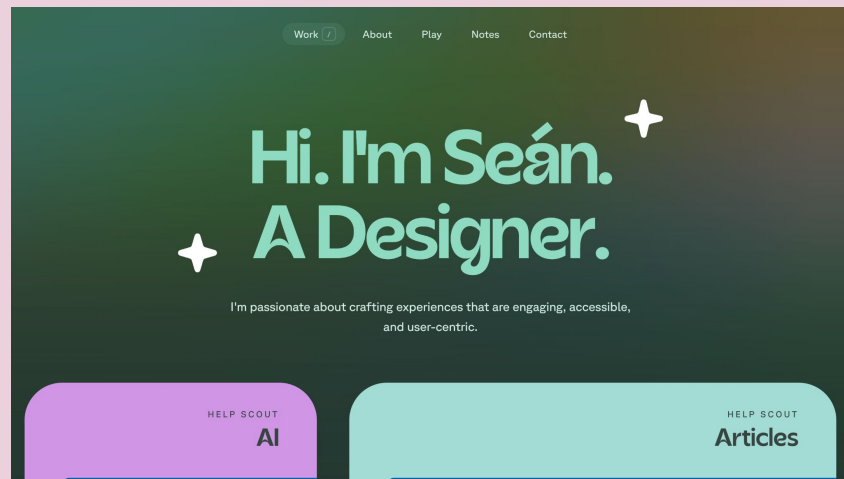

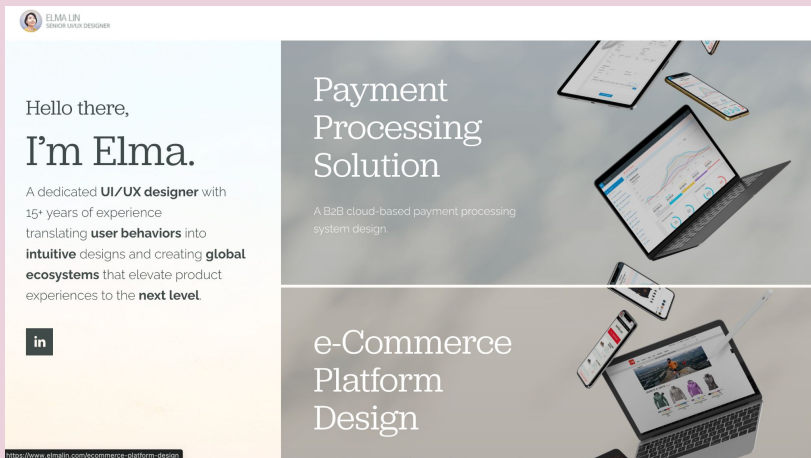

# Next Steps

- Do more research on timeline section and outline
- Moving color gradient background
- Dark Mode
- Adding a Spanish Version
- Refining overall style
- Filter buttons for project section

# Inspo

- [Sean Sample Portfolio](#)
- [Olaolu Sample Portfolio](#)
- [Kelly Sample Portfolio](#)
- [Elma Sample Portfolio](#)
- <https://itssharl.ee/>

# Important Points to include

- A demo of the site and the progress you have made
- A snippet of code you figured out (perhaps a tutorial you found or some responsive behavior you figured out)
- Be sure to include at least one media query in your CSS for responsive behavior. If you are only picking one media query, make sure it is mobile (max-width: 768px). I will be asking you to resize your screen when you demo!
- Next steps (if you had more time, or if you plan on continuing to add functionality for your final)
- Your midterm project code and documentation (and copy of slideshow if applicable) must be present in your repo.
- Presentation is part of your midterm grade, this is how it is marked on-time. I will not be grading your *code* until Thursday, March 21. You will have an entire week after your presentation to continue coding your project. If you make any considerable changes within the extra week, please email me so that I am aware your project may look/behave differently than when you presented.
